## Glyphosate 700 Soluble Granules

### *General Purpose Non Selective Glyphosate Herbicide*

Soluble Granular Glyphosate (700g/kg) Herbicide is used in the effective control of annual and perennial weeds, unwanted trees and noxious woody weeds. The superior granular formulation is designed for broad acre farming and general purpose use (non aquatic). The granules are double the strength of comparative liquid glyphosate.

#### **Benefits Include:**

- Fully loaded with the wetter included in the granule
- Faster kill time and shorter rain fast period than comparative concentrate liquids
- OHS compliant – a 10kg carton is easier and safer to handle than a 20L drum of liquid concentrate (25kg)
- Environmentally friendly packaging, no plastic drum to dispose of
- Soluble granule that completely dissolves in water to make spray mix
- Compatible with a full range of herbicides (refer to direction of use)
- Registered to kill over 100 different types of noxious weeds
- Proudly Australian owned and manufactured.

The active ingredient, glyphosate present as mono-ammonium salt is transferred through the weed faster than traditional liquid concentrate formulas. This means Glyphosate 700 Soluble Granules offer a quicker kill and shorter rain fast period. Glyphosate 700 Soluble Granules completely dissolve in water and are very convenient to mix and store with no plastic drums to dispose of. The cartons are easier to handle than heavy drums.

**Pack Sizes:** 10kg carton – each 10kg makes approximately 2000L of glyphosate spray

#### **Registration Details:**

Registered for use in Australia by Ronic International Pty Ltd.

**APVMA Approval Number:** 58946.

MSDS available on request.

Directions of use supplied with goods (including mixing rates).

**Mixing Rate:** General Mixing Rate 5g/L Water.  
Refer to directions of use for specific mixing rates
