## Velmac G – Granular Hexazinone Herbicide

Velmac<sup>®</sup> G Granular Hexazinone Herbicide is used for the control of a wide range of annual and perennial grasses, broadleaf weeds and woody weeds in commercial and industrial areas, rights of way, around agricultural buildings and in *Pinus radiata* plantations. The product is a granular formulation that does not need to be mixed in water. It is an effective residual herbicide. For best results apply during periods of active growth.

This product is recommended for use specifically in industrial situations and offers a very good residual effect which stops weeds from regrowing for up to 4 years.

Velmac<sup>®</sup> G is made from 200g/kg Hexazinone and is especially recommended in areas with hard to kill established above-ground weeds. It has high knock-down ability. Velmac<sup>®</sup> G *should not be applied close to trees or desired species*. (Allow 1.5 times their height clearance from trees as chemical can leach in the soil after heavy rain).

Velmac<sup>®</sup> G is ideal for industrial sites where total weed control is desired for 3-4 years at a time. It is not recommended for domestic use. The Instruction label is attached with the product, and should be reviewed prior to use. Velmac<sup>®</sup> G is for use where bare ground is required. The product is granular for easy application. The 1kg shaker is particularly convenient. Just remove the cap and sprinkle granules. Note that there is no point in over-application. One granule every 3-4 cm<sup>2</sup> is all that is required.

**Active Ingredients:** 200g/kg Hexazinone

**Pack Sizes:** 1kg Shaker & 20kg

**Manufacturer:** Macspread Pty Ltd

**APVMA Number:** 45442

Directions For Use with mixing rates are supplied with product and should be read before use.
