## Woody Herbicide

The active ingredients Triclopyr & Picloram have activity on a range of broadleaf weeds. Woody<sup>®</sup> Herbicide is classified as a group I Herbicide. Once applied the weed cannot continue to grow due to the disruption of cell growth of the plant. Woody<sup>®</sup> is registered for the control of a range of environmental and noxious woody and herbaceous weeds as specified in the directions of use table (supplied with the product). Once applied, Woody<sup>®</sup> moves to the tips of growing shoots and roots, where the Triclopyr and Picloram effects the plants growth.

Read all product literature for further instructions and consult directions for use label supplied with product prior to use.

Woody<sup>®</sup> Herbicide is proudly Australian owned and manufactured.
